

This is by far the best project I've seen in this class or similar programming classes including those classes I taught at Northwestern University prior to coming to IUK. Simply job-well done and beyond expectations. Thank you, million times! It is well-done in every aspect including internal and external documentations, coding, execution, two-version solution, and every other aspect I can think of I really can see the efforts and the many hours you spent on this project.

\Here are some comments: The bugs in Version 1 are fixed but here are a few others I found (good practice for you to have fun with during the summer break!) Exceptions occur if you choose option 10 (remove an account) and you choose to enter something like df111 It is possible to create an account without an account number (just hit enter when you are asked for an account number). This is a bug because each account must have a number to serve as a key for that account. Suggestions for the GUI: It would look much nicer that when I run the program I see more than the menu on top. A simple fix would be to include a large image for some bank (stock photo) and some welcome text. I think this will make it look nicer.

Deposit/withdrawal: the button is disabled until you hit enter. I don't think there's some instructions for me to hit enter. I'm not sure why I couldn't remove an inactive customer. I thought this is the customer that I should be able to remove from the system,

I would like to thank you for submitting this kind of project. You really showed great programming skills that you must be proud of. As I mentioned in my grading comments, this is one of the best projects I've seen for such a long time. I'm really proud of your accomplishments.

I would like to thank you for helping other students in class, especially your teammates. I'm sure they learned so much while working with you. It was pleasure having you in this class.

PS: the extra credit you received for this project is not the same as for your teammates. This is all based on the readme reports you guys attached with the project which clearly shows that you have done most of the work.

Great job and good luck!
